

Short Easy Essay on Wonders of Science - 200 to 250 Words

Science is a blessing to humankind as it makes man the master of the world and plays a vital role in everyone's lives. We can't imagine our life without science and its innovations. The wheel of progress depends on it. However, due to innovations in science, it is named "the wonders of science" because of their impacts.

The invention of electricity led to a significant change in the world. It runs our textiles, homes, hospitals, trains, internet, cell phones, towers, etc. We can't imagine our life without electricity. All the other innovations of science rest on electricity as it requires in every sector of life.

Science made a massive impact on medical science. It gave us treatment for many life-taking diseases like anaemia, liver failure, kidney stones, etc. In the past, people died of minor diseases like the flu. Science gives humans the latest technology like chemotherapy, dialysis machines, MRI machines, X-Ray machines, and many more. Now diagnosing the problem becomes much easier with the help of these inventions.

The innovation of science has changed the way of communication as now people can contact any other person in any corner of the world. It has created a dynamic way of sharing information. In the past, many days have passed to send and receive a single message, but now this can be ineffective, especially when time is of the essence. Mobiles and the internet have helped to reduce the distance between people.

Science has done many wonders in agriculture and proved to be a real friend of farmers. It benefits and saves farmers time by growing high-quality crops, good-quality seeds, and heavy machines. Science improves their lifestyles.
